IMPORTANT

CHRISTMAS TREE GROWING is attracting many newcomers to the nursery field. For their convenience we have prepared below a list of common names and the botanical equivalent under which they can be found in this catalog.

Seedlings are often available at prices lower than you can grow them. Still more and more Christmas Tree Growers are producing their own. Purchased seedlings are frequently far ahead or far behind the season at their planting site. Had they been grown near the site, their development would have been parallel. Also they would be lifted and planted simultaneously. These and numerous other factors make for better field survival and stronger plants from home-grown seedlings.

So many letters ask us what should be grown and how. Such questions cannot be answered in a letter. We now list two books which everyone considering seedling production should read:

"Seeding & Planting in the Practice of Forestry" by Toumey & Korstian is a forestry school text book—\$8.00

"How to Grow & Sell Christmas Trees" by Lawrence is a newcomer—\$3.00

If these books are not available in your library, we shall be glad to secure them for you as quoted. Prices stated are postpaid in the U.S.A. only.

F1 HYBRID PETUNIAS

ARE YOU INTERESTED IN KEEPING COSTS DOWN AND STILL GROW THE FINEST F-1 PETUNIAS? Of course you are. The fact that so many of our customers year after year increase their orders for our F-1 Petunias is clear indication of it. They are satisfied with the excellent germination we maintain and their customers prize these F-1 Petunias in their gardens. Under no other conditions could our business increase nor could we attract so many new customers every year.

Like most other items in our catalog, the following F-1 Petunias are yours at material savings in costs. We can rightfully glorify them with superlatives, but that would do only half a job.

You try them, and you will use the superlatives and buy greater quantities every year.

nana compact or multiflora types

All compact very dwarf plants with marked resistance to stem rot and botrytis.
